

# STATISTICAL MEASURES

## Measures of Central Tendency

- The mode of a data set is the value that occurs most frequently. There can be no mode, one mode, or several modes.
- The median of a data set is the value that lies in the middle when the data are arranged in size. When there are two middle values then the median is the midpoint between the two values
- The mean of a data set is the sum of all the values divided by the number

<b>SL 4.2</b>	Interquartile range	$IQR = Q_3 - Q_1$
<b>SL 4.3</b>	Mean, $\bar{x}$ , of a set of data	$\bar{x} = \frac{\sum_{i=1}^k f_i x_i}{n}$ , where $n = \sum_{i=1}^k f_i$
	Sample statistics	
	Unbiased estimate of population variance $s_{n-1}^2$	$s_{n-1}^2 = \frac{n}{n-1} s_n^2$

Example 1:

The number of days of sunshine in Helsinki in January was recorded for a period of 35 years and the data is given in the frequency table:

Number of days of sunshine x	Number of years f	fx	cf
3	1	3	1
4	2	8	3
5	1	5	4
6	2	12	6
7	7	49	13
8	5	40	18
9	9	81	27
10	8	80	35

	n = 35	278	
--	--------	-----	--

- State the modal number of days of sunshine in January in Helsinki for the period.  
9
- Calculate the mean number of days of sunshine in January in Helsinki for the period.  
 $278/35 = 7.94$
- Determine the median number of days of sunshine in January in Helsinki for the period.  
8
- Comment on how a “day of sunshine” might be defined.

### Calculator Support (Casio)

Press **MENU** 2 **STAT** to display the List Editor screen.

Type 3, 4, 5, ... 10 in the first column.

Press **EXE** after each number to move to the next cell.

**Note:** If the list contains other numbers, you can clear it by pressing **F4** DEL-ALL.

	List 1	List 2	List 3	List 4
SUB				
1	3			
2	4			
3	5			
4	6			
				6
				GRAPH CALC TEST INTR DIST ▶

Press **▶** to move to the next column.

Enter the frequencies of each of the ages in the second column.

	List 1	List 2	List 3	List 4
SUB				
1	3	1		
2	4	2		
3	5	1		
4	6	2		
				2
				GRAPH CALC TEST INTR DIST ▶

To calculate an estimate of the mean of the ages represented in the table.

Press **F2** CALC.

Press **F6** SET.

Change 1Var Freq to List2 by pressing **F2** LIST and typing 2.

Press **EXIT**.

1Var XList	:List1
1Var Freq	:List2
2Var XList	:List1

2Var Freq	:1
1	LIST

<p>Press <b>F1</b> 1-VAR.</p> <p>The results show that the estimate of the mean (<math>\bar{x}</math>) is 7.94. So, the mean number of days of sunshine is 7.94 days.</p>	<div>1-Variable</div> <div> <math>\bar{x}</math> =7.94285714  <math>\Sigma x</math> =278  <math>\Sigma x^2</math> =2330  <math>\sigma x</math> =1.86613209  <math>sx</math> =1.89337633  <math>n</math> =35 </div>
<p>Scroll down using .</p> <p>The table of statistics shows that the median is 8. So, the median number of days of sunshine is 8 days.</p>	<div>1-Variable</div> <div> <math>n</math> =35  <math>\min X</math> =3  <math>Q1</math> =7  <math>Med</math> =8  <math>Q3</math> =9  <math>\max X</math> =10 </div>
<p>Further scrolling reveals yet more statistics.</p> <p>The table of statistics shows that there is one mode which is 9 and the frequency is 9 as well.</p>	<div>1-Variable</div> <div> <math>Med</math> =8  <math>Q3</math> =9  <math>\max X</math> =10  <math>Mod</math> =9  <math>Mod:n</math> =1  <math>Mod:F</math> =9 </div>

## Measures of Dispersion

- Measures of dispersion measure how spread out a data set is.
- The most common measure of dispersion is the range, which is found by subtracting the smallest number from the largest number
- The standard deviation,  $\sigma_n$ , gives an idea of how the data values are related to the mean. The standard deviation is also known as the root mean-squared deviation.
- The variance is the standard deviation squared:  $\sigma_n^2$
- An outlier is defined as a data item that is more than  $1.5 \times IQR$  below  $Q_1$  or above  $Q_3$
- Outliers are extreme data values, or the result of errors in reading data, that can distort the results of statistical processes

Example 2:

The number of days of precipitation in January in London for 2008–2017 is given in the table:

Year	2008	2009	2010	2011	2012	2013	2014	2015	2016	2017
Days of Precipitation	19	16	21	21	13	21	30	26	21	15

- Write down the range of the number of days of precipitation in January in London for these years.

- b. Calculate the interquartile range of the number of days of precipitation in January in London for these years.  
5
- c. Find the standard deviation of the number of days of precipitation in January in London for these years.  
4.80
- d. Find whether the 30 cm precipitation in January 2014 is an outlier.  
Yes  $30 > 28.5$

### Calculator Support (Casio)

Press **MENU** 2 **LIST** to display the List Editor screen.

Type the numbers 19, 16, 21, ... 15 in the first column. Press **EXE** after each number to move to the next cell.

**Note:** If the list contains other numbers, you can clear it by pressing **F4** DEL-ALL.

	List 1	List 2	List 3	List 4
SUB				
1	19			
2	16			
3	21			
4	21			
				21
<b>GRAPH</b> <b>CALC</b> <b>TEST</b> <b>INTR</b> <b>DIST</b> <b>▶</b>				

To calculate statistics for this dataset

Press **F2** CALC.

Press **F6** SET.

1Var XList should be List1 and 1Var Freq should be 1.

Press **EXIT** **◦**

```

1Var XList :List1
1Var Freq  :1
2Var XList :List1
2Var YList :List2
2Var Freq  :1

LIST

```

Press **F1** 1-VAR.

The table of statistics shows that the minimum is 13 and the maximum is 30.

```

1-Variable
n      =10
minX   =13
Q1     =16
Med    =21
Q3     =21
maxX   =30

```

Press **MENU** 1 **≡** **≡** to display the Run-Matrix screen for arithmetical calculations.

The statistics that you calculated earlier are all stored as variables.

To calculate the range Use Range = maxX – minX.

Press **VAR** **F3** STAT **F1** X **F6** **▷** **F3** maxX.

**–** **F2** minx and press **EXE**.

```
maxX-minX
17
[ ]
sx minXmaxX [▷]
```

To calculate the interquartile range Use IQR = Q3 – Q1.

Press **EXIT** **F3** GRAPH **F6** **▷** **F6** **▷** **F1** Q3.

**–** **F6** **▷** **F6** **▷** **F4** Q1 and press **EXE**.

The inter quartile range is 5.

```
maxX-minX
17
Q3-Q1
5
[ ]
r r² MSe Q1 Med [▷]
```

To retrieve the standard deviation press **EXIT** **F1** X **F5**  $\sigma x$  and press **EXE**.

The standard deviation is 4.80 days.

```
maxX-minX
17
Q3-Q1
5
σx
4.796873982
[ ]
n x̄ Σx Σx² σx [▷]
```

To determine whether 30 is an outlier use  $Q3 + 1.5(IQR)$

Select Q<sub>3</sub> and Q<sub>1</sub> from the list to enter the calculation

$Q3 + 1.5 (Q3 - Q1)$ .

$30 < 28.5$ , so 30 is an outlier.

```
Q3-Q1
5
σx
4.796873982
Q3+1.5(Q3-Q1)
28.5
[ ]
r r² MSe Q1 Med [▷]
```

## Statistical measures of continuous data

### Example 3:

Heights of 200 r trees are measured and the results recorded:

Height,h, (m)	$0 < h \leq 1$	$1 < h \leq 2$	$2 < h \leq 3$	$3 < h \leq 4$	$4 < h \leq 5$	$5 < h \leq 6$
x	0.5	1.5	2.5	3.5	4.5	5.5
Frequency	17	35	69	51	22	6

fx						
----	--	--	--	--	--	--

- a. Find estimates for the mean and standard deviation of the height of these r trees.

Mean = 2.72

Standard deviation = 1.20

- b. State why your calculations are estimates.

## Unbiased Estimators

Example 4.

The number of breakdowns on a road in a city is studied. A sample of 20 observations is recorded on 20 different days. Let  $X$  be the number of breakdowns on a particular day. It is given that  $s_n^2 = 3.8$ .

- (a) Find  $s_{n-1}^2$ .

[2]

Let  $\bar{X}$  be the mean of the sample. It is also given that there are 60 breakdowns in these 20 days.

- (b) Find an unbiased estimate of the population mean.

[2]
