

Trigonometry Bearings Problems

twinkl

The background of the slide is a detailed topographic map. A large, semi-transparent compass rose is centered over the map. The map shows various geographical features like rivers, roads, and contour lines. The compass rose has a circular center with lines radiating outwards, and the text 'Learning Objective' is written in a large, bold, orange font across its upper half.

Learning Objective

To apply trigonometry to bearings problems.

The background of the slide is a detailed topographic map. A large, semi-transparent compass rose is centered over the map. The map shows various geographical features like rivers, roads, and contour lines. The compass rose has a circular center with lines radiating outwards, and the text 'Success Criteria' is written in a large, bold, orange font across its lower half.

Success Criteria

- To sketch diagrams from given bearings problems.
- To calculate missing sides in bearings problems with acute angles.
- To calculate missing sides in bearings problems with non-acute angles.

Starter: Bearings

A bearing is how we measure the direction of travel from one place to another.

The unit of measure for bearings is degrees.

We can use a compass to measure bearings.

What are the **three rules to remember** when working with bearings?

- Always measure a bearing from the **north** line.
- Always measure in a **clockwise** direction.
- Bearings are given in **3 figures**, e.g. 270° or 085° .

SOHCAHTOA

Cover the letter of the part that you want to find.
This tells you which calculation needs to be done.

$$\sin \theta = \frac{\text{Opposite}}{\text{Hypotenuse}}$$

$$\cos \theta = \frac{\text{Adjacent}}{\text{Hypotenuse}}$$

$$\tan \theta = \frac{\text{Opposite}}{\text{Adjacent}}$$

The Dolphin

A dolphin swims on a bearing of 065° for 6km.
How far **east** is it from its starting position?
Give your answer correct to 1 decimal place.

not to scale

Answer:

$$\sin \theta = \frac{\text{opp}}{\text{hyp}}$$

$$\sin (65^\circ) = \frac{x}{6}$$

$$\sin (65^\circ) \times 6 = x$$

$$x = 5.4\text{km to 1d.p.}$$

The Dolphin

A dolphin swims on a bearing of 065° for 6km.
How far **north** has it travelled?

Give your answer correct to 1 decimal place.

not to scale

Answer:

$$\cos \theta = \frac{\text{adj}}{\text{hyp}}$$

$$\cos (65^\circ) = \frac{x}{6}$$

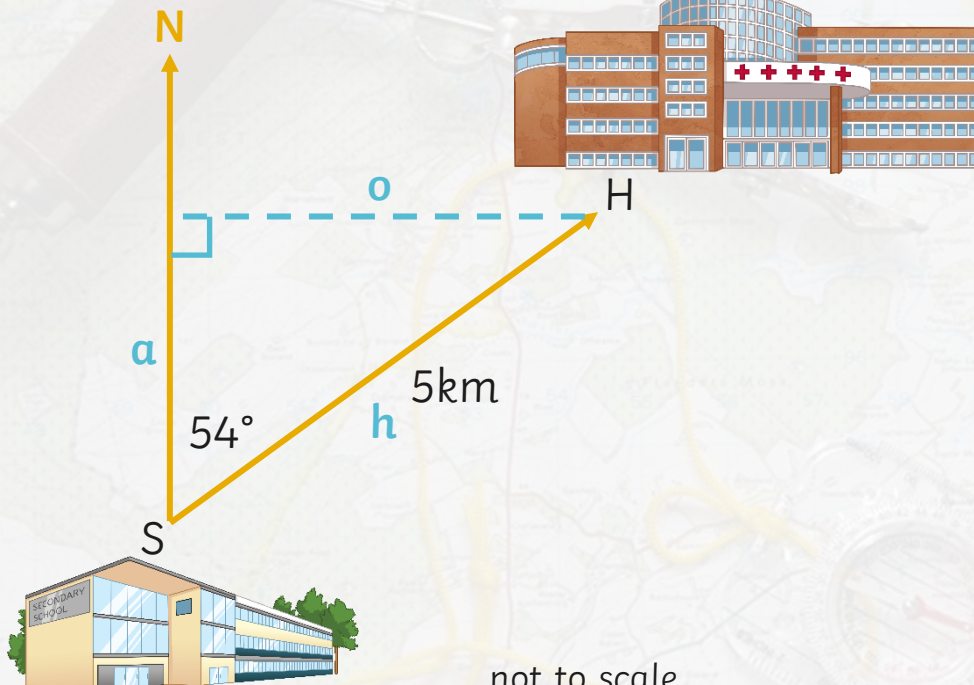

$$\cos (65^\circ) \times 6 = x$$

$$x = 2.5\text{km to 1d.p.}$$

The Hospital

A hospital (H) is 5km away from a school (S) on a bearing of 054°. How far east of the school is the hospital? Give your answer correct to 1 decimal place.

Answer:

$$\sin \theta = \frac{\text{opp}}{\text{hyp}}$$

$$\sin (54^\circ) = \frac{x}{5}$$

$$\sin (54^\circ) \times 5 = x$$

$$x = 4.0\text{km to 1d.p.}$$

Your Turn: Acute Angles

Give your answers correct to 1d.p. where appropriate.

1. A ship sails for 85km on a bearing of 082° .
 - a. How far north has it travelled from its starting position?
 - b. How far east has it travelled from its starting position?

Remember to sketch a diagram first and label the sides.

$$\text{a. } \cos(82^\circ) = \frac{x}{85}$$

$$\cos(82^\circ) \times 85 = 11.8\text{km}$$

$$\text{b. } \cos(82^\circ) = \frac{x}{85}$$

$$\cos(82^\circ) \times 85 = 84.2\text{km}$$

5:00

Your Turn: Acute Angles

Give your answers correct to 1d.p. where appropriate.

2. The entrance to a park is on a bearing of 062° from a shop at a distance of 2km. How far east of the shop is the park entrance?

$$\sin(62^\circ) = \frac{x}{2}$$

$$\sin(62^\circ) \times 2 = 1.8\text{km}$$

3:00

Your Turn: Acute Angles

Give your answers correct to 1d.p. where appropriate.

3. A seal swims on a bearing of 034° for 12km.
How far north has it travelled?

$$\cos(34^\circ) = \frac{x}{12}$$

$$\cos(34^\circ) \times 12 = 9.9\text{km}$$

3:00

Your Turn: Acute Angles

Give your answers correct to 1d.p. where appropriate.

4. Eshal swims on a bearing of 075° for 150m.
How far east is she from her starting position?

$$\sin(75^\circ) = \frac{x}{150}$$

$$\sin(75^\circ) \times 150 = 144.9\text{m}$$

3:00

Obtuse Bearings

A boat sails on a bearing of 130° for 35km.
How far east has it travelled from its starting point?

If the angle in a bearing question is not acute we need to find its 'partner' acute angle.

$$130 - 90 = 40^\circ$$

Answer:

$$\cos \theta = \frac{\text{adj}}{\text{hyp}}$$

$$\cos (40^\circ) = \frac{x}{35}$$

$$\cos (40^\circ) \times 35 = x$$

$$x = 26.8\text{km to 1d.p.}$$

Obtuse Bearings

A boat (B) is due south of a lighthouse (L) and sails on a bearing of 340° for 35km until it is due west of the lighthouse. How far away is it now from the lighthouse? Give your answer correct to 2d.p.

If the angle in a bearing question is not acute we need to find its 'partner' acute angle.

$$360 - 340 = 20^\circ$$

Answer:

$$\sin \theta = \frac{\text{opp}}{\text{hyp}}$$

$$\sin (20^\circ) = \frac{x}{35}$$

$$\sin (20^\circ) \times 35 = x$$

$$x = 11.97\text{km to 2d.p.}$$

Your Turn: Non-Acute Angles

Give your answers correct to 1d.p. where appropriate.

1. Bangor is 6 miles from Caernarfon on a bearing of 230° .
How far south of Bangor is Caernarfon?

$$\begin{aligned}230^\circ - 180^\circ &= 50^\circ & \cos(50^\circ) &= \frac{x}{6} \\ \cos(50^\circ) \times 6 &= 3.9 \text{ miles}\end{aligned}$$

Remember to sketch a diagram first and label the sides.

Don't forget to work out the angle's 'acute partner'.

3:00

Your Turn: Non-Acute Angles

Give your answers correct to 1d.p. where appropriate.

2. Canterbury is 20.8km from Margate on a bearing of 315° .
How far west of Margate is Canterbury?

$$360^\circ - 315^\circ = 45^\circ$$

$$\sin(45^\circ) = \frac{x}{20.8}$$

$$\sin(45^\circ) \times 20.8 = 14.7\text{km}$$

Remember to sketch a diagram first and label the sides.

Don't forget to work out the angle's 'acute partner'.

3:00

Your Turn: Non-Acute Angles

Give your answers correct to 1d.p. where appropriate.

3. A statue is 130m from a church on a bearing of 095° .
How far east is the statue from the church?

$$180^\circ - 95^\circ = 85^\circ$$

$$\sin(85^\circ) = \frac{x}{130}$$

$$\sin(85^\circ) \times 130 = 129.5\text{m}$$

Remember to sketch a diagram first and label the sides.

Don't forget to work out the angle's 'acute partner'.

3:00

Your Turn: Non-Acute Angles

Give your answers correct to 1d.p. where appropriate.

4. A tree is 22.7m from a house on a bearing of 350° .
How far north of the house is the tree?

$$360^\circ - 350^\circ = 10^\circ$$

$$\cos(10^\circ) = \frac{x}{22.7}$$

$$\cos(10^\circ) \times 22.7 = 22.4\text{m}$$

Remember to sketch a diagram first and label the sides.

Don't forget to work out the angle's 'acute partner'.

3:00

Check MB's Tasks tab.

Plenary: Exam Question

Zack walks 32km due east from A to B.

From B, he then heads due south for 35km to position C.

Calculate the bearing of C from A.

$$\tan \theta = \frac{\text{opp}}{\text{adj}}$$

$$\tan \theta = \frac{35}{32}$$

$$\theta = \tan^{-1}\left(\frac{35}{32}\right)$$

$$\theta = 48^\circ$$

(to the nearest whole number)

We haven't finished yet.

Why not?

We need to add 90° to calculate the bearing:

$$48^\circ + 90^\circ = 138^\circ$$
